Availability: remote, part-time roles only. Freelance engagements welcome.

Plain English version. The Technical version and the source for each claim are on the web page.

SUMMARY

Five years at a firm that helps companies run Salesforce, the system businesses use to track customers, sales, and service. Seven years before that managing sales teams and the systems they ran on. Looks after thirteen companies on retainer at Cirrius Solutions: eight in ten renewed in the first half of 2026, and he holds the best project score on the team. One of nine people named on the work that won the firm a Salesforce Partner of the Year award. Builds AI tools for his own work and for clients. Explains hard things in plain words, and still does the hands-on work himself.

SELECTED RESULTS

Thirteen companies on retainer, the most on the team. Eight in ten renewed in the first half of 2026. Best project score on the team.

One of nine people named on the work that won the firm a 2027 Salesforce Partner of the Year award (Sept 2026).

Two companies re-signed their support contracts in July and August 2026, one of them for another full year.

Turned a 244-line audit document into 96 tracked tasks in about ten minutes using an AI assistant. By hand it took half a day.

Set up the system a client uses to schedule technicians (leadership called it “a resounding success”) and built a sales team a dashboard that now sits on their home page.

CORE SKILLS

Salesforce: Setting up and running the system companies use to track customers, sales, service, and field technicians. Deciding who sees what. Moving changes into the live system without breaking it.

Dashboards: Charts and dashboards that show a business how it is doing, built simple enough that people use them.

Connections: Connecting the customer system to other software (contract signing, mobile carriers, maps) and fixing the link when it breaks. Earlier tools: Zapier, Salesmate, Delphi.

AI tools: Building AI helpers with Claude Code and related tools, and showing a client’s IT team how to adopt AI safely.

Running the work: Ongoing support contracts, renewals, client testing, monthly reviews with clients, sales support, and leading a team.

HOW I USE AI

- Thor: an AI assistant that keeps my project notes, daily plan, and task list up to date.
- Audit to tasks: a 244-line audit became 96 tracked tasks in about ten minutes. Half a day by hand before.
- Reusable tool: a client’s form requirements become ready-to-run instructions for a form builder, with a back-up-first rule added after learning the builder’s AI rewrites the whole form.
- Looking inside a client’s system: connected the AI assistant to a client’s Salesforce to pull out every piece a software package touched, which made the review cleaner.
- Working rule: let the AI ask questions before it acts. Shared with the team, along with a client safety guide that became a company-wide template.

EXPERIENCE

Cirrius Solutions Inc. · a firm that helps companies run Salesforce — Jun 2021 to present

Team Lead, Managed Services (Feb 2024 to present) · Senior Consultant (Jun 2023 to Feb 2024) · Salesforce Consultant (Jun 2021 to Jun 2023)

- Responsible for results across thirteen companies on retainer. Runs the team day to day, coaches two consultants, runs the daily check-in, and still does hands-on work.
- Holds monthly reviews with clients, handles contract renewals, and is one client’s named contact for anything to do with their data. Built a sales deck that leadership said got the deal across the line.
- For one client: wrote a guide to using Claude safely (who can log in, how long data is kept, what it costs) and walked their IT team through it. The firm now reuses that guide. Put a new build live and checked that it worked. The client renewed in August 2026.
- For a medical-device maker: got their contract-signing tool talking to their customer system again after it broke; checked every connected system before an old login method was switched off; removed a healthcare add-on ahead of schedule without losing data; set up who can see and do what. Before a scheduled wipe of their test system, listed everything that would be lost, including things that were not the firm’s responsibility, and the client acted on it.

- For a client's sales team: built the dashboard that shows how sales are doing. Testers approved it and it now sits on their home page. Work on the same account helped win the Partner of the Year award.
- For a client whose system talks to a mobile carrier: checked their own diagnosis of a failing connection without changing anything, confirmed they were right, and found one more case they had missed. Took on the fix. Their CEO confirmed the catch in writing.
- For a client with technicians in the field: set up the system that schedules their jobs, and added maps with a short how-to video.
- Organized the team through a client's testing push and got the work ready for the client to sign off.
- Built an AI assistant that keeps project notes, daily plans, and task lists current. Connected an AI assistant to a client's system to pull out every piece a software package touched. Built a tool that turns a client's form requirements into ready-to-run instructions for a form builder, with a back-up-first rule. Shares the approach with the team.
- Guest on the firm's podcast episode about keeping Salesforce safe (April 2026). Mid-year review: "one of the most trusted and high-impact leaders we have."

Final Mentor, LLC. · Fort Lauderdale, FL — Jun 2019 to Jun 2021

Customer Engagement Manager & CRM Administrator

- Looked after customers and designed the training for sales, marketing, and automation products.
- Built automations in Salesmate (a customer-tracking tool) and connected other tools to it through Zapier.
- Found software that cut manual work and sped up sales. Set up remote-work tools and routines during COVID-19.

Innovative Health Group, LLC. · Fort Lauderdale, FL — Mar 2017 to Jun 2019

Sales Manager / Salesforce Admin

- Managed fifty sales reps against daily and monthly goals, and coached the team.
- Key player in the company's move to a new version of Salesforce, and ran the system day to day: user accounts, data imports, reports and dashboards, training, automations, custom fields, and apps.
- Ran technology training for new hires and built the training for new tools.

Maggiano's Little Italy · Hackensack, NJ — Mar 2014 to Jun 2017

Regional Sales and Supply Chain Coordinator

- Ran catering sales, kept supplies stocked, scheduled deliveries, and did the marketing for the region. Organized charity events that raised the brand's profile and catering sales.
- Used Delphi (a contract and customer tool) for contracts, follow-up, and feedback.

CERTIFICATIONS

Salesforce Certified AI Specialist, Oct 2024
Salesforce Certified Data Cloud Consultant, Sep 2024
Salesforce Certified Experience Cloud Consultant, Aug 2023
Salesforce Field Service Consultant, Feb 2023
Salesforce Certified Sales Cloud Consultant, Jul 2022
Salesforce Certified Service Cloud Consultant, Apr 2022
Salesforce Certified Platform App Builder Certification, Oct 2021
Salesforce Certified Administrator (SCA), Feb 2021

Top rank on Salesforce's training site and seven hands-on badges there (2021). Working through Anthropic and OpenAI certifications.

EDUCATION

- Western Governors University, B.Sc. Information Technology Management, 2021
- Eagle Scout, Scouting America, 2009

HOW THIS PAGE WAS BUILT

Everything on this page comes from one file that holds each line twice, once in plain words and once in Salesforce terms, with a note on where each claim comes from. Three things are built from that file: this page, a Word copy for job-application systems, and the two PDFs. Before anything is published, I run a checking script on it that catches any em-dash, filler phrase, or client name. Built with Claude Code, the same way I run client work: write the rules down, let the tools enforce them, keep one source of truth.

Written with Claude Code under my rules: every number has a source, every quote is word for word, no filler, no client names.

Client names are left off on purpose. References are available with the client's consent. Last updated 2026-10-14.
